

Emerging Systems Clinical Mobility Solution

One System. One Logical Place to Access and Input Complete Patient Information.

Emerging Systems are leaders in healthcare technology and have supported the delivery of safe, quality healthcare in leading Australian public and private hospitals for over a decade. Our award winning Clinical Information System is an integrated and patient-centric system providing multi-disciplinary access and input to an entire patient care episode electronically from anywhere.

As part of our broader Clinical Information System, we developed the Emerging Clinical Mobility Solution in consultation with Clinicians to meet their workflow requirements. The intuitive user interface results in Clinicians adopting the technology easily while improving productivity almost immediately. Information within the electronic medical record updates in real time at the enterprise level for timely decision making.

Our Complete Offering

- Clinically driven functionality as part of a fully integrated clinical information system
- Accessible from a range of locations, streamlining care delivery and patient flow
- Easy adoption requiring minimal training
- Instant, secure access anytime, anywhere for concurrent users
- Integration with PAS, Path, Rad to deliver a range of information for timely decision making
- Affordable solution
- Meets national quality and safety healthcare standards

Benefits You Can Expect

- Reduced risk for patients and the organisation with cost benefits
- Improved communication, clinical hand-over and staff morale
- Workforce productivity improvements, clear documentation, consistent care
